

## **Releases a native app for organizing employee's availability**

*After planning and iterating development, the best app for organizing employee's availability is now available at Google Store*

Kamloops, Nov. 23th, 2020 – a group of software developers at TRU announced today a mobile application named Go Schedule which gives employers access to keep track of every employee's availability and make any change from the confidence of their smartphone in a private way.

From big to small businesses the importance of organization is a key to success. Keeping track of their employee's availability is important and having that information in a handy way and anytime is essential. Go Schedule allows managers to create schedules for corresponding weeks, having access to the list of employees and the hours they are available to work. It also has a feature of displaying the schedule for each day and the employees starting and ending time for their shifts as well as the capability of storing a contacts list.

Most small and medium business do not have a good method to organize schedule for their employees during the week and sometimes it can lead to miss shifts and waste money and time. So, as a team we have come up with an app that is going to give those employers access to keep track of every employee's availability and make any change from the confidence of their smartphone in a private way.
